DETAILED ACTION

Claim Rejections - 35 U.S.C. § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-7 are rejected under 35 U.S.C. 103(a) as being unpatentable over Shaffer et al. (US Pat# 5,991,387) in view of Gerzberg et al. (US Pat# 6,044,403)

Regarding claim 1, Shaffer teaches a monitoring and controlling channels to improve the interface of calls comprising a communication outlet housing with a user interface, premise interface and a controller in the form of a firmware in (see fig. 7, col. 5 lines 15-22 and cols. 3-4) but fails to teach the claimed subject matter in detail. Gerzberg teaches an adapter which can be coupled to a plurality of communication devices and a LEC wherein the adaptor (intelligent services director of fig. 2 and disclosure) includes a central controller (102a) for controlling the various interfaces.

Therefore, it would have been obvious to one of ordinary skill in the art at time the invention was made to incorporate the teaching of Gerszberg into Shaffer thus making it possible to provide multimedia services to users by using an interface (adapter).

Art Unit: 2643

Regarding claims 2-7, it's well known to use splitters or wall interface when connecting telecommunication devices to telephone service providers and the examiner takes official notice to this regard. The combination teaches interfaces.

3. Claims 8-20 are rejected under 35 U.S.C. 103(a) as being unpatentable over Shaffer et al. (US Pat# 5,991,387) in view of Gerzberg et al. (US Pat# 6,044,403) and further in view of Peters (US Pat# 5,933,775).

Regarding claims 8-20, The combination fails to teach encryption, user authentication and wireless interface.

The examiner takes official notice that it's notoriously well known to use encryption during transmission of data information and to request a user for authentication information.

Furthermore, Peters teaches a mechanism for providing wireless audio and control channels for personal computer phone system wherein a wireless and wireline interface can be used for controlling premise communication devices in (see figs. And disclosure).

Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to incorporate the teaching of Peters into that of the combination in addition to the well known fact of authentication and encryption as means of providing multi-media services including wireless services,.

Conclusion
